- between 30 and 40 radar antennae were observed in the winter harbor in Riga. The antennae, which were approximately one meter wide and one-third meter high, were square and had grating construction. They were on masts which were about eight meters tall. The masts were mounted either on very low ships or on floats; however, these could not be seen.
- 2. about ten similiar antennae were seen in Kronshtadt 50X1-HUM harbor. The antennae were mounted in the same way as those seen in Riga.

Attachment.. Sketch of radar antennae observed in the ports of Riga and Kronshtadt.
